FOR IMMEDIATE RELEASE**New Icomera X4 Router For Metro Rail and Road Applications**

Icomera extends its innovative transport applications router product family

London, England, June 9th 2011 – Icomera, the world's leading provider of open Internet connectivity and application platforms for passenger transport and public safety, today announces a new addition to its series of mobile access and applications routers. Following on from last September's launch of the revolutionary Icomera X6, the Icomera X4 offers a scaled-down applications platform for Metro Rail, Freight Rail and Road transport customers. Alongside the Icomera X4 launch, Icomera is refreshing the Icomera X6 and both products will now be IP67 rated.

Icomera X6 and the Icomera X4 are based on the same hardware and software platform, allowing Icomera's application partners to write applications that will automatically be deployable on both platforms whether these are installed on a high speed train or a bus.

"We are thrilled about this launch," says Roger Sandén, President and CEO of Icomera. "The Icomera X6 has been a tremendous success since the launch at InnoTrans last year. We have sold more systems in the past eight months than we did in the eight years prior to that and with the Icomera X4 we are looking to increase that further."

"Together with these products, Icomera is also upgrading its cloud based fleet management system" says Martin Bergek, Vice President Business and Product Development. "With this new system we can support large scale roll-out projects with simple drag-and-drop system configuration and application deployment."

Icomera X6 and Icomera X4 are available for order now. For more information, go to www.icomera.com.

About Icomera

Icomera launched the world's first high-speed Internet solution for trains in September 2002 and is today the world's leading provider of open Internet connectivity and application platforms for passenger transport and public safety. Our award-winning products are deployed on rail, road and sea, serving more than 15 million Wi-Fi users in over 20 countries and providing high-speed access for fleet tracking and mission-critical on-board systems.

Transport solutions of the future will require more than connectivity - passengers need to be entertained, the vehicles need to be monitored and the staff need to be kept informed. Together with our application partners Icomera is already meeting these and other needs through the deployment of complete transportation communication solutions.

Established in 1999, Icomera is headquartered in Sweden with office in the United Kingdom and channel partners worldwide. For more information visit <http://www.icomera.com>.
